The movie Kal Ho Naa Ho, production house Veer Yodha Productions, year 2014. It was released on 6 September 2014. This Bollywood movie directed by Jayant Chadha. It is a Indian drama film written and directed by Jayant Chadha. The film features a performance of Kunal Khemu and Preeti Jhangiani in lead roles. The film is produced by Pankaj Kapoor and Uday Chopra under banner Pankaj Kapoor Films. The background score is by Arko Music.

Bispecific anti-CD30-CD19 antibody-chimeric antigen receptor T cell therapy in refractory and relapsed Hodgkin lymphoma: results of the phase 1 study. Patients with advanced Hodgkin lymphoma who have relapsed or are refractory to standard therapy are faced with a dismal outcome. In this phase 1 trial, we evaluated the safety and efficacy of a bispecific anti-CD30-CD19 antibody-chimeric antigen receptor T cell therapy in these patients. Twenty patients with relapsed or refractory Hodgkin lymphoma were enrolled in 2 cohorts. In cohort A, 18 patients received weekly subcutaneous administration of anti-CD30-CD19 antibody-chimeric antigen receptor T cells combined with a subcutaneous dose of pembrolizumab, a humanized monoclonal antibody against programmed cell death 1. In cohort B, 2 patients received a similar treatment, but they also received an anti-CD19 antibody, and 2 additional patients received the antibody-chimeric antigen receptor T cells alone. T-cell dose escalation was based on the safety and efficacy of the therapy as reflected by the early toxicity and best response. After administration of a median of 4.7×10^7 T cells/m², anti-CD30-CD19 antibody-chimeric antigen receptor T cells appeared to be safe and well tolerated, with a median duration of in-patient stay of 9 days. However, 2 patients died of refractory multiorgan failure after cytokine release syndrome occurred within 7 days after T-cell infusion. For all patients, a best response of partial remission or better was observed in 30% of patients. The median overall survival and progression- 82157476af
